Topics

- Navigation Service
- Universal OSGi

Navigation Service

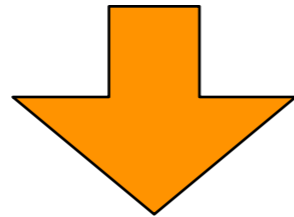

Navigation service is a key facilitator for location-based service.

- A model is under development within OSGi
 - model for locations and routes
 - supports road network attributes

- **However, more interested parties needed**

Universal OSGi

- Currently OSGi = Java
- Makes OSGi hard to sell in embedded, automotive field

Extend OSGi outside the Java environment

Some aspects:

- Native bundles
- .NET bundles
- Federated Service Registry
