ProSyst Provides Remote Management Solutions for Cisco Application eXtension Platform

ProSyst provides innovative OSGi Runtime and Remote Management Software

Cologne, April 10, 2008 — ProSyst Software GmbH (www.prosyst.com) announced today that its OSGi™ framework, "mBedded Server Professional Edition", and its remote management platform "mPower Remote Manager" has met the Cisco Technology Developer Program criteria for interoperability with the Cisco Application eXtension Platform (AXP) that was launched by Cisco today.

The ProSyst products will be offered as add-on options for different industry vertical segments for Cisco AXP. ProSyst delivers an open standards-based platform that combines flexibility with ease of integration.

ProSyst also announced it has joined the Cisco Technology Developer Program as a Cisco AXP partner.

The Cisco AXP offers tighter integration between the network and business applications, which drives greater business efficiencies and innovation while optimizing the branch footprint. Based on an open Linux architecture, the Cisco AXP is delivered via network modules and Advanced Integration Modules (AIM) for the Cisco ISR. Multiple applications can be supported on a single AXP platform concurrently using virtual containers, simplifying branch architecture and configuration.

"ProSyst brings OSGi expertise and proven solutions in remote management to the Cisco AXP third party hosting environment for Cisco Integrated Services Routers," said Dave Frampton, Vice President in Cisco's Access Routing Technology Group. "The ProSyst solution suite will complement a wide range of Cisco AXP industry vertical solutions."

ProSyst mBedded Server (mBS) is a high performance, low footprint OSGi R4 certified framework implementation. The core framework provides a runtime foundation to run and manage the lifecycle of various applications in a secured and modularized environment. OSGi Alliance specifies a Java execution environment for software components, and the mBS implementation reduces the complexity of large applications by building them from a number of collaborating components. mBS provides a dynamic model where components can be added and removed without requiring restarts. In addition, mBS defines many standard component interfaces for common functions such as HTTP servers, configuration, logging, security, user administration, XML and many more.

Based on open standards from Java™, OSGi™ and OMA™ specifications, ProSysts mPower Remote Manager (mPRM) is a highly scalable remote management system geared to manage both OSGi frameworks and non-OSGi devices. mPRM enables dynamic deployment of services and applications to the Cisco AXP as well as ongoing monitoring and management. These applications and components can be remotely installed, started and stopped, and updated dynamically from a central location.

In addition, ProSyst offers an optimisation tool for embedded Java, the ProSyst JProfiler, that also comes as an Eclipse plug-in. ProSyst Java-related services range from inhouse development, support, training to high end technical consulting.

ProSyst is a Java pioneer and joined the OSGi Alliance as one of its first members in 1999. Since then the company is entirely focussed on that technology and most actively involved in helping to create the OSGi specifications R1 – R4. Dr. Susan Schwarze from ProSyst is a board member of the OSGi Alliance and VP Marketing. Kai Hackbarth from ProSyst is the Requirements Chair for the OSGi Alliance and runs the Residential and Vehicle Expert Groups. The OSGi Mobile Expert Group is co-chaired by Gabor Pecsy from ProSyst.

"Being selected by Cisco, the leader in network technolgy is important for ProSyst and further emphasizes our position as a leading provider of OSGi solutions in all vertical markets," said Daniel Schellhoss, Executive VP ProSyst.

For details on ordering the AXP platform and the Cisco AXP Prosyst solution, please contact your local Cisco Reseller. For more information, please visit www.cisco.com/go/axp

About ProSyst
ProSyst offers client and server side OSGi service platforms as well as the development of generic and custom applications. Manufacturers and service providers use the OSGi-based and certified technology from ProSyst to dynamically extend, manage and secure platforms and to enable the creation of applications and functions as simple, interoperable, sharable components.
ProSyst offers products and services for all vertical markets that use OSGi technology, such as Mobile Devices, Smart Home, Automotive, Enterprise and industrial applications.
ProSyst customers include Alcatel, Alpine, BMW, Bosch, Bombardier, CA, Cisco, Epson, GM, HP, ICW, Motorola, Miele, Nokia, Philips, SAP, Siemens, Sprint Nextel, Telefónica, Telstra and Thales Alenia Space, and many more. The company was founded in 1997. Headquartered in Cologne, Germany ProSyst operates additional offices in Sofia, Bulgaria and Seoul, Korea. ProSyst is a privately held company and employs 120+ Java/OSGi engineers. Contact ProSyst on the Web at www.prosyst.com.
